1) Which tasks have been completed?

Front end:
  - Created chrome extension and visual pop-up using Javascript and HTML.
  - Implemented search bar and basic title/text graphics to set up the pop-up layout.

Back end:
  - Extension automatically extracts all URLs from the Bookmark Tree and adds to a list.
  - Implemented adding documents and corresponding to corpus in order to search through documents later on.

2) Which tasks are pending?
Front end:
  - Better visuals, more organized for easier user interaction.

Back end:
  - Extract text data from each URL to perform text retrieval rankings.
  - Implement IDF for BM25.
  - Implement BM25 ranking and search function.
  - Find a Javascript library that can help tokenize the documents and remove stop words and determine word stem.

3) Are you facing any challenges?
Little information on bookmark manipulation, but this should not be an issue.
